Electrical Solutions for Power Generation
Fossil, nuclear and hydroelectric power generation plants are the Goliaths of heavy industry in size, scope and influence. Their continuous streams of energy are crucial to the everyday lives of people across the globe, making the operators unrelentingly focused on reliability, availability and efficiency.
Challenge and commitment.

Power generation using fossil, nuclear and hydroelectric sources has long proven to be effective, reliable and economical to the global consumer. These utilities have served growing populations and increasing energy demand for decades, but mounting pressures on the industry are motivating infrastructure changes. With each technological innovation deployed, suppliers must assess the impact on performance and design compatibilities from:

- Key electrical equipment
- Critical parts
- System design
- Quality power output
- Consumer demand satisfaction

The business drivers for change are many. Fossil fuels, such as coal and oil, are seeing competition from green, renewable sources. Fossil power generators are retooling, modifying and upgrading their plants with technology that is cleaner and more energy efficient. Hybrid auxiliary systems are also being deployed. Natural gas, the cleanest fossil fuel, has been the fuel of choice for most plants constructed since the 1990s. Higher-efficiency combined-cycle and peaker plants, new distributed generation options and modern extraction methods increase the importance of natural gas. Nuclear and hydroelectric sources are clean, but new construction has stagnated. Aging plants must be rejuvenated to increase capacity and efficiency. New plants are subject to substantial capital investments and greater regulations, requiring developers to meet objectives for reliability, efficiency and safety.

The advent of the Smart Grid deepens the reliance on an advanced network of electrical solutions, requiring suppliers to deliver superior products that will perform as described when they are needed. Thomas & Betts meets these expectations by providing:

- High-quality products
- Product performance guarantees
- Product warranties
- Expert services and training
- Pre-sets of engineering design solutions

Thomas & Betts warranties and guarantees demonstrate the confidence we have in our electrical products and services. Full-wrap warranties on product alignment assure our customers of the quality of whole, integrated systems. All products, regardless of supplier, are aligned and integrated throughout the entire supply chain. Output performance guarantees assure Thomas & Betts customers that they will be able to generate sufficient reactive power to fill consumer demand. Because our products will perform reliably, your system will perform at the guaranteed level of effectiveness.

Performance ratio guarantees set standards for the amount of output produced by the generator that is actually available, which ultimately affects consumer pricing and ROI. To support this guarantee, Thomas & Betts focuses on system optimization through engineering, system design and manufacture of supply chain components and a high level of service response. Calibrated performance guarantees reflect our dedication to eliminating underperformance of any part of the system by ensuring optimal engineering, design and product quality.

Power Generation

Coal  Natural Gas  Petroleum  Nuclear  Hydro
Delivering value and innovation through engineered system solutions.

Our Value Commitment

Extending the lives of aging power generation plants and constructing new, high-tech utilities requires implementing advanced networks of electrical products.

Thomas & Betts takes an active role in ensuring total system performance and availability through optimal product design and engineering, expert services and training and a layered approach to guarantees and warranties that reflects our confidence in our solutions.

Our value commitment includes:

T&B Engineered solutions — Our products are designed to perform continuously and dependably, in compliance with regulatory requirements and with full system compatibility.

Tested reliability — Our products are rigorously tested for use in harsh and demanding environments, with proven results in thousands of installations.

Expert support — Thomas & Betts trained sales representatives and technical services experts are available at every stage of a project, from planning and site preparation through construction and MRO.

Training and certification — Thomas & Betts conducts training programs on specific products and systems and works closely with accredited electrical industry associations.

Product availability — Our industry-leading distributor network assures you of reliable and on-time delivery. This global electrical product support system ensures that our solutions are available when and where you need them.

Product Platforms

Quality, performance and energy efficiency top the list of power utility supplier specifications. Thomas & Betts offers an array of electrical solutions that work together to ensure high plant availability and output reliability.

Wire & Cable Management — T&B invented the Ty-Rap® cable tie in 1958 and continues to lead the world in innovative wire and cable management. OEMs, panel builders, contractors and maintenance personnel depend on T&B electrical boxes, cable ties, weatherproof enclosures, cable tray and modular metal framing to do the job right and help reduce installation time and costs.

Cable Protection Systems — T&B Cable Protection Systems provide unsurpassed protection for wire and cables in the most demanding applications. They encompass industry-leading flexible conduit systems, PVC-coated conduit and fittings recognized as the standard in oil and gas applications and explosion-proof conduit systems meeting worldwide standards for hazardous locations.

Power Connection & Control — For reliable connection and intelligent control of electrical power, T&B mechanical and compression connectors, grounding products, medium-voltage cable accessories, high-voltage fuses, vacuum interrupters, reclosers and capacitor switches are specified worldwide in the industrial, construction and utility markets.

Safety Technology — Protecting lives and property requires state-of-the-art technology. T&B is a worldwide leader in emergency lighting and supporting central battery systems, lighting for hazardous locations and surge protection. T&B Safety Technology extends the life of your electrical system and protects your employees and assets.
Key drivers for power generation facilities

- Increase product safety and reliability
- Improve quality awareness
- Ensure power sustainability
- Enhance power plant availability
The power generation industry, which has performed solidly for decades, is undergoing a transformation brought on by government regulations, consumer demand and evolving industry standards. New and emerging technological developments support cleaner and more efficient energy generation and higher availability for plants young and old. Thomas & Betts is leading the way with high-quality, innovative electrical systems and devices that perform optimally with minimal product lifecycle costs. Integrated engineering design solution sets simplify product selection. Fewer, snap-together parts ease installation and maintenance. Training and support services ensure ongoing safe and reliable operation, while warranties instill confidence that our products will perform as required and meet your performance and output demands.
Power Generation Solutions

- Safety & Contamination
- Continuous Operation & Sustainability
- Grounding & Bonding
- Power Quality, Efficiency & Reliability
- Corrosion & Harsh Environment Protection
- Extreme Temperature Protection
- Total Project Cost Reduction
- Liquid Ingress Protection
- Services & Training
Health, safety and contamination are key concerns in fossil, nuclear and hydroelectric power generation. Fossil fuel pollution, coal tar leaks, radiation from nuclear plants and dam integrity breaches get immediate attention from industry regulators and the public. However, the more common, causal issues such as arc flash, grounding errors and vibratory abrasion must be actively mitigated in order to:

- Avoid electrical shocks and burns
- Prevent explosions and fire
- Protect against sustained vibration
- Avert exposure to toxins
- Avoid fugitive emissions
- Eliminate equipment contamination
- Prevent code violations

These issues are alleviated when quality electrical products are properly selected and installed. Thomas & Betts offers a full suite of electrical solutions that provide active protection against safety and contamination risks. The products include safety labels and lights, cable ties to reduce abrasion and heat-shrink and conduit products to insulate and protect wiring.

**Survive-All™ SVX Combo Series**
- NEMA 4X certified for wall or ceiling mount
- High-efficiency MR16 lamps up to 12V, 12W or white LED emergency lights
- Fully automatic charger is solid state

**EMERGI-LITE®/Lightalarms®**

**Ty-Rap®**
**Cable Ties**
- UV resistant
- "The Grip of Steel®" non-magnetic stainless steel locking device
- Versatile nylon 6.6 material
- With and without color and non-color UV-stabilizing additive
- Smooth notchless body reduces stress concentration points under tension

**National Electrical Code and NEC are registered trademarks of the National Fire Protection Association, Inc.**
Safety failures at power generation plants bring increased scrutiny and regulations on the industry. What are you doing to stay protected?
**Continuous Operation & Sustainability**

In power generation utilities, costly downtime and expensive repairs are to be avoided. If power is lost during generation and reactive power is lost, it could shut down grid operations and cause the need to draw power from other sources. To prevent downtime, power generators need electrical solutions that ensure:

- Superior product engineering
- Quality product construction
- Accurate product selection
- Availability on demand
- Proper installation

UPS systems, motor lead disconnects, liquidtight conduit fittings and electrical interconnection systems are just a few of the solutions that Thomas & Betts offers to maximize uptime. Our distributor network makes certain that all product needs are filled in a timely manner. With more than 100 years of serving the power generation industry, you can count on Thomas & Betts products, services and support to prevent outages and ensure sustainable operations.

**Russellstoll®**

GSUL Ground Indicator System
- Ensures safe power movement with ground monitoring
- Establishes safe ground via two visual indicators

MaxGard® Fused Disconnect Interlocked Receptacle
- Heavy service amp loads
- Ever-Lok® system for durable operations
- Backup door safety latch

**T&B® Fittings**

Type A Liquidtight Flexible Non-Metallic Conduit
- Non-metallic, steel and stainless steel fittings
- Ideal for continuous flexing or vibration applications
- Create a liquid-, dust- and oil-tight seal

**Blackburn®**

Motor Lead Disconnects
- Quick, reliable change-out of electric motors with no bolting, taping or loose connections
- Complete line for 600V and 5kV applications, and total assembly fits into tight motor housings
- Featuring the Color-Keyed® Compression System that ensures proper connections

**Industrial UPS Systems**

- Designed to UL® standards and manufactured for a 20-year service life
- Ranges from 10 to 150kVA, incorporating state-of-the-art system topology for higher online system efficiency and longer battery life
- Digital Static Transfer Switch design provides increased redundancy and dependability
The unquenchable demand for electric power can be met with the right products and support services.
Grounding & Bonding

The electronic technologies in power generation utilities are subject to electrical hazards if improperly grounded or bonded. Grounding absorbs current surges, and bonding eliminates the electrical potential. Together, proper grounding and bonding will:

- Ensure personnel safety
- Eliminate lightning interruptions
- Protect critical equipment
- Meet IEEE, UL® and CSA obligations
- Provide electrical continuity and reliability

Good electrical connections are required for grounding and bonding. Thomas & Betts offers a wide-ranging selection of products and sizes to accommodate all grounding and bonding applications. The right product selection will minimize the number of conductors and terminations required.

Our durable, code-compliant systems, onsite grounding and bonding training and installation support are designed to ensure the safe and reliable operation of your plant’s electrical systems and increase overall equipment effectiveness.

T&B® Fittings

Blackjack® Grounding Bushings
- Innovative design makes installation quicker and easier
- Design improves performance with superior continuity
- Design secures grip forms for lasting bond

Blackburn® Mechanical Grounding Connectors
- Comprehensive line of pipe, ground rod and structure grounding solutions
- UL® Listed for direct-burial applications

Blackburn® Compression Grounding and Bonding Connectors
- E-Z-Ground® connectors are UL® Listed for direct-burial applications
- Range-taking products reduce the number of connectors and dies needed for your installation

Exothermic Grounding System
- Self-contained method of forming high-quality electrical connections
- Requires no external power or heat source, making it completely portable
- Will withstand repeated fault currents without loosening

T&B® Fittings

Blackjack® Grounding Bushings
Blackburn® Mechanical Grounding Connectors
Blackburn® E-Z-Ground® Compression Connectors
Blackburn® Exothermic Welding System
Do you have the right mechanical, compression and exothermic products for your above-ground and direct-burial grounding applications?
Power Quality, Efficiency & Reliability

When a fossil, nuclear or hydroelectric power generator experiences power quality issues such as voltage drops, it puts the plant at risk of equipment damage, blackouts and large financial losses. Thomas & Betts offers solutions that answer the need for power quality, efficiency and reliability. Our products and systems enable maximum uptime and control by:

• Detecting faults and protecting against overcurrent and voltage drops
• Preventing damage due to power quality disturbances
• Eliminating underperformance, minimizing system losses and increasing usable power

Electrical solutions from Thomas & Betts prevent electrical network events, improve customer satisfaction and protect stakeholder ROI.

**elastimold**

Distribution Switchgear

• Solid EPDM insulating media makes it maintenance-free and environmentally friendly — no oil, no gas
• Compact and modular designs allow for smaller footprint and field assembly inside tight vaults

**CYBEREX.**

Industrial UPS Systems

• Designed to UL® standards and manufactured for a 20-year service life
• Ranges from 10 to 150kVA, incorporating state-of-the-art system topology for higher online system efficiency and longer battery life
• Digital Static Transfer Switch design provides increased redundancy and dependability

**Joslyn®**

Surge Protection Devices

• Facility-wide protection: service entrance to equipment level
• Proprietary designs and individually fused MOVs maximize performance and reliability
• Multiple voltage configurations with available surge ratings of 25kA to 400kA
• Listed to UL® 1449 3rd Edition; RoHS compliant

**Fisher Pierce®**

Faulted Circuit Indicators

• Adaptive trip reset reduces inventory and eliminates the need to replace devices as the load changes
• Temporary fault detection option to help locate nuisance temporary faults
• Highly visible strobe, LED and fluorescent orange flag indication options — and SCADA ready

**Hi-Tech®**

Current-Limiting Fuses

• Greatly reduce energy let-through, minimizing the risk of catastrophic failures
• Interrupting capabilities up to 50,000A
• Address arc flash concerns and generate no external arcing or byproducts
Do your electrical products meet your tolerance requirements? Do you need to improve your power factor?

**Thomas & Betts products for power quality, efficiency & reliability**

**Cyberex**
- Industrial UPS Systems

**Elastimold**
- Solid-Dielectric Switchgear, Switchgear Automation Packages, Molded Vacuum Interrupters and Arresters

**Fisher Pierce**
- Faulted Circuit Indicators and Voltage and Current Sensors

**Hi-Tech**
- Trans-Guard Fuses, Molded Current-Limiting Fuses, Molded Canister Fuses

**Joslyn**
- Surge Protection Devices

**Joslyn Hi-Voltage**
- Capacitor Switches, Reclosers, Air Disconnect Switches and Interrupter Attachments
Corrosion & Harsh Environment Protection

Power generation facilities are often situated in harsh environments, whether it's the freezing North, hot and humid South or a hydroelectric plant facing the daily onslaught of moisture and humidity. In each case, corrosion and oxidation pose a direct threat to operational safety and reliability. Protecting against harsh and corrosive conditions requires specially designed electrical systems and devices that are able to withstand:

• Excessive moisture and high winds
• Lightning
• Sand, dust and salt spray
• Prolonged sunlight, ice and hail

Several approaches can be taken to protect the electrical infrastructure from the elements. For instance, Thomas & Betts offers products designed with corrosion-resistant stainless steel, heat-shrink insulation to protect exposed wiring and conductors, coatings to provide water resistance and a product portfolio designed to avoid dissimilar metal occurrences. Thomas & Betts’ extensive electrical product line is designed, manufactured and tested to meet all NEMA, UL®, NEC®, IEEE and other specified code requirements.

T&B® Fittings

Stainless Steel Liquidtight Conduit Fittings

- Quickly seal with low torque
- Quality ground through metallic compression
- Single helical threads for easy installation
- Rolled-over edge for conductor protection

BlueKote® Conduit Bodies

- Multi-layer protection with epoxy external finish for superior corrosion control
- Tapered NPT threads for integrated bushing
- BlueKote® internal finish for faster, easier wire pulling

Ocal®

OCAL® PVC-Coated Conduit

- Industry leading thread protection through a hot-dipped galvanizing process, and industry leading UL® Listed Type 4X PVC-coated conduit bodies.
- Meets the requirements of NEMA RN-1 without exception.
- UL® Listed with both the zinc coating and the PVC coating investigated and listed per UL6.
- UL® Listed including UV resistance testing.
- PVC-Coated Conduit System provides superior corrosion protection against many harmful elements
- Interior blue urethane provides corrosion protection around copper wire or fiber optics

Ty-Rap®

Cable Ties

- Polypropylene ties engineered for harsh environments, especially for corrosion resistance
- Stainless steel ties for enhanced corrosion protection
Thomas & Betts products for corrosion & harsh environment protection

Kindorf®
- 316 Stainless, Aluminum, PVC-Coated or Non-Metallic Channel, Hangers and Clamps, Seismic Bracing System

Kopex-Ex™
- Stainless Steel Flexible Conduit and Fittings for Hazardous Locations

Ocal®
- PVC-Coated Conduit Systems
- OCAL-BLUE® Type 4X Form 8 Conduit Bodies

Red•Dot®
- Code Keeper® Weatherproof While-in-Use Covers

Russellstoll®
- MaxGard® Pin-and-Sleeve Connectors and Explosion-Proof Interlocked Receptacles

Sta-Kon®
- Corrosion-Resistant, Nickel-Plated Wire Terminals
- Shrink-Kon® Heat-Shrink Insulation for Harnesses, Wires or Cables
- Shrink-Kon® Self-Fusing Insulation Tape

T&B® Cable Tray
- Aluminum, Stainless Steel and Fiberglass Support and Wire Management Systems

T&B® Fittings
- Liquidtight Conduit and Fittings (Type A Stainless Steel/Non-Metallic, Type B Non-Metallic, Type C Stainless Steel/Aluminum)
- ATX High-/Low-Temperature Liquidtight Conduit and Fittings
- Stainless Steel Form 8 and BlueKote® Conduit Bodies, CorroStall® Aluminum Conduit Boxes
- XTRA FLEX® Non-Metallic Liquidtight Conduit, Tubing and BULLET® Fittings

Ty-Rap®
- Coated and Uncoated Stainless Steel Cable Ties

Uncontrolled corrosion can cause leaks, component failure and potentially hazardous conditions.
**Extreme Temperature Protection**

Power generation plants that are exposed to extreme temperature conditions need products that can withstand the heat or cold and still perform effectively. Environmental damage can shorten the electrical product lifecycle and prove costly to the plant. Instead, the owner/operator must:

- Prevent premature material aging due to prolonged heat
- Avoid material contraction and expansion due to ground frost
- Protect against physical damage from hail

Extreme high and low temperatures may also affect a product’s malleability, making it brittle or weaker than intended. Thomas & Betts offers numerous electrical systems and devices that are designed to withstand and insulate against severe temperatures.

Among the solutions that Thomas & Betts offers are cable ties made of heavy-duty stainless steel and extra-high temperature resistant nylon; insulated terminals with high-temperature ratings; high- and low-temperature fittings; flexible metal conduit; and other products designed specifically to protect against intense heat or cold conditions.

**Ty-Rap®**

**Extra-High Temperature Nylon Cable Ties**

- For use in temperatures from -40° to 150° C
- Feature “The Grip of Steel®” stainless steel locking device and offer infinite adjustability

---

**T&B® Fittings**

**ATX Liquidtight Flexible Metal Conduit and Fittings**

- Construction utilizes the flexibility of a standard cable core
- Engineered with the advantage of a thermoplastic rubber jacket
- Virtually unaffected by temperature extremes
- Contain no halogens
- Flammability rating of UL94-HB

**Sta-Kon®**

**High-Temperature Wire Terminals**

- Tefzel® insulated terminations for high temperatures
- Braised and overlapped seams eliminate chances for lost wire strands, poor resistance, wire pullout and electrical failure
- Selective annealing to strengthen materials and reduce fatigue
- Anti-rotational tongue prevents shorting by keeping terminal secure within the block

Tefzel is a registered trademark of the DuPont Corporation.
The risk of extreme temperatures on power generators is twofold: electricity load increases as consumers seek to maintain comfort levels, and the electrical infrastructure is tested for durability.

Thomas & Betts products for extreme temperature protection

Kopex-Ex™
- Stainless Steel Flexible Conduit Systems for Hazardous Locations

Sta-Kon®
- High-Temperature Wire Joints and Terminals

T&B® Fittings
- ATX High-/Low-Temperature Liquidtight Conduit and Fittings

Ty-Rap®
- Coated and Uncoated Stainless Steel, Extra-High Temperature and Flame-Retardant UL94V-0 Nylon Cable Ties
- Ty-Rap Tote® Cable Tie Dispensers and Ergonomic Installation Tools
Total Project Cost Reduction

Government funding, taxpayer-subsidized loans and other investment sources are essential to getting new power generation projects off the ground. To convince investors of a project’s cost effectiveness, developers must control:

- Financing costs
- Construction costs
- Environmental regulations
- Fuel expense

Selecting Tier 1 suppliers increases the probability of winning favorable funding. Thomas & Betts, a Tier 1 supplier that is LEAN and ISO certified, has a proven ability to deliver high-quality, high-performance electrical solutions.

Thomas & Betts develops products that are easy to install and maintain to save on labor costs. Our systems are engineered with fewer parts to reduce product costs. We enable regulatory compliance upfront to prevent rework later. Our ongoing research and product development helps our customers achieve high energy efficiency, which translates into greater electricity production from less fuel consumption. Manufacturing process controls, safety controls, Factory Acceptance Testing (FAT) and prompt product availability further reduce total project costs.

Steel City®
Pre-Fab Components and Assemblies
- All outlet boxes have pigtail grounding straps
- All UL® Listed components
- Horizontal or vertical support mounting
- Durable steel construction

Kindorf®
King Cobra® Cable and Pipe Clamp
- Can carry up to 450 lbs.
- Durable one-piece construction
- Quick one-handed installation
- Attaches EMT and rigid conduit

Trapnut® Strut Fastener
- Reduces installation time by up to 43% as compared to traditional methods for many mechanical framing assemblies
- Unique scissor action closes at any point on the rod — no need to thread it on from the end

T&B® Fittings
Series 35 Conduit Bodies
- Standard tapered NPT
- Seven bodies from which to choose
- Gray iron zinc-plating with aluminum acrylic coating
- Neoprene gaskets included
- Standard compliance UL®, Fed. Spec and CSA
According to the U.S. Energy Information Administration, 223 gigawatts of new generating capacity (including end-use CHP) will be needed between 2010 and 2035.

Liquid Ingress Protection

If dew point, moisture or liquid breaches an electrical product, it poses a serious and potentially compounding threat to power generation operations. Power plants must prevent liquid ingress in order to:

- Ensure electrical safety
- Prevent corrosion
- Avoid system degradation
- Minimize costly downtime

Wiring systems are a prime concern for protection. Proper product selection and installation minimize the amount of condensed moisture and rain water flowing into electrical system enclosures. Waterproof materials, watertight devices, sealing systems and compounds are among the approaches to mitigating liquid ingress concerns.

At Thomas & Betts, we offer moisture protection systems and equipment such as liquid-, moisture- and vapor-tight fittings; waterproof interconnection systems; watertight connectors and insulating covers; and watersafe boxes. We also provide training and support to ensure proper product installation and maximum protection from liquid ingress.

**T&B Fittings**

Stainless Steel Liquidtight Conduit Fittings
- Quickly seal with low torque
- Quality ground through metallic compression
- Single helical threads for easy installation
- Rolled-over edge for conductor protection

Type A Liquidtight Flexible Non-Metallic Conduit and Fittings
- Non-metallic, steel and stainless steel fittings
- Ideal for continuous flexing or vibration applications
- Create a liquid-, dust- and oil-tight seal

**Russellstoll**

DuraGard® Pin-and-Sleeve Connectors
- CDA 360 solid brass pin and sleeve contact
- Locking bushing with external cable clamps
- Housing mechanical support to hold pin-and-sleeve connections
- Meet NEC® 210-7 and OSHA standards

**Code Keeper® Weatherproof While-in-Use Covers**
- A380 aluminum alloy, zinc and stainless steel
- Die-cast construction
- Convenient mounting lugs
- NEMA 3R rated, UL® E-2969 and CSA certified

- Stainless Steel Form 8 and BlueKote® Conduit Bodies
- CorroStall® Aluminum Conduit Boxes
- Ranger® Series Liquidtight Cord Connectors

Electrical systems that are engineered and assembled to resist moisture will provide safety, performance and uptime benefits for the owner-operator and stakeholders.
Services & Training

The loss of expertise due to the rising average age of the workforce is putting power generation reliability at risk. Senior-level employees are quickly nearing retirement age, while young entrants into the field are lacking the skills needed for immediate productivity. Key challenges include:

- Aging workforce
- Retirement of institutional knowledge
- Evolving regulations
- Rapidly advancing technology
- Skills gap

Thomas & Betts takes several approaches to addressing these challenges. We offer engineering design and product solution sets that simplify the process of selecting the right products for an application. Our guarantees and warranties provide assurances that selection decisions will be supported.

Our ongoing innovations in electrical system reliability, efficiency and safety are designed to make jobs easier. As a full-service provider, Thomas & Betts offers product training, installation training and certification, application support, technical support, field engineering and onsite troubleshooting to ensure successful plant operation and maintenance.

Blackburn®
- The QTP program provides a guaranteed two-week shipment of Blackburn® products
- Configurator enables special connectors to be designed with a guaranteed two-week shipment
- Product specification specialists and the Mobile Solutions team are available nationwide to train in the proper use and installation of Blackburn® products
- Inside Tech Support group provides 24/7/365 expertise for Blackburn® products
- Tool service and loaner and tool leasing programs

Ocal®
- Onsite installation training provides a review and hands-on practice of clamping, cutting, threading, assembling and repairing the Ocal® PVC-coated conduit system
- Training also extends warranty from two to five years on a system installed by a certified contractor

Additional Services & Training
- NEC® Update Training provides an overview of the latest changes to the National Electric Code®
- Grounding & Bonding Training covers design, layout and connections

### Thomas & Betts Specification Guide

Thomas & Betts product guide specifications are available as Microsoft Word documents at [www.tnb.com](http://www.tnb.com). They follow the CSI three-part format, using section numbers from MasterFormat® 2010 Update. This enables their simple and seamless incorporation into any CSI compliant electrical specification. Following are products referenced in this brochure:

26 05 19.01 Cord and Cable Fittings  
26 05 26.01 Compression and Mechanical Grounding Connectors  
26 05 26.03 Exothermic Welding System  
26 05 29.11 Modular Metal Framing System — Kindorf®  
26 05 33.14 Corrosion-Resistant Conduit Systems  
26 05 33.18 Weatherproof Boxes and Covers  
26 05 33.24 Liquidtight Conduit Fittings  
26 05 36 Cable Trays for Electrical Systems  
26 05 83.12 Wiring Connections: Compression Lugs, Splices and Connectors  
26 05 84 Wire and Cable Fastening  
26 27 26.11 Wiring Devices: Metallic Pin & Sleeve  
26 27 26.12 Wiring Devices: Non-Metallic Pin & Sleeve  
26 52 00 Emergency Lighting  
33 72 11 Utility Substation Capacitor Switches and Controls
